

LEGAL AND ETHICAL GUIDELINES

By submitting a manuscript to the Environmental Studies and Health Research (ESHR), the authors confirm that they have read and agreed to adhere to the following legal and ethical standards:

Authorship

Authorship must be attributed solely to individuals who have made significant contributions to research or manuscript preparation. All authors' affiliations (academic, corporate, or other) and contact information (emails) should be listed. Individuals with minor contributions should be acknowledged in the "Acknowledgements" section.

Corresponding Author

The corresponding author (CA) acts as the primary point of contact between the journal and all co-authors throughout the submission and review process. The CA is responsible for submitting the initial manuscript and any revised and proofread versions if the manuscript is accepted for publication.

Plagiarism and Copyright

Plagiarism, including reproducing text, tables, graphs, illustrations, or images from other works without proper attribution, is strictly prohibited. Similarly, self-plagiarism—submitting multiple papers with nearly identical content by the same authors—is discouraged. Authors are solely responsible for ensuring proper credit for any open-source materials used. If copyrighted material is included, authors must obtain the necessary permissions. *Authors retain the copyright of their work published in ESHR, and any disputes concerning copyrighted materials used in the manuscript are strictly between the authors and the original content owners. The journal bears no responsibility for such disputes.*

Data Collection

Authors are fully accountable for the accuracy of the data presented in the manuscript. To protect human subjects' privacy, researchers must obtain informed consent from participants for studies involving human subjects. Authors must ensure their research complies with all relevant institutional, national, and international regulations. Please refer to the Declaration of Helsinki for further details.

In studies involving animal models, researchers must adhere to relevant laws and guidelines regarding the humane treatment of animal subjects. Authors are responsible for ensuring all ethical standards are met when submitting a manuscript, and a detailed description of compliance should be included in the methods section.

Conflict of Interest

A conflict of interest arises when an author's views diverge from scientific facts, potentially influenced by personal or financial interests, political bias, or other motivations. ESHR encourages authors to remain objective and focused on scientific evidence. Manuscripts reflecting the views of political or special interest groups will be rejected.
